

ERRATA

Due to calculation errors Figure 5 in Volume 42 Part 1, page 29 is incorrect. The correct version of the figure is shown below. As a result of these errors the following corrections are necessary in the text: Page 27, second to last line; the years should be “280,000 or 505,000 years” - not “430,000 or 750,000 years”. Page 28, fourth line: date should be “100 million years ago” - not “70 million years ago”. Page 29, fifth line: date should be “100 million years” - not “70 million years”.

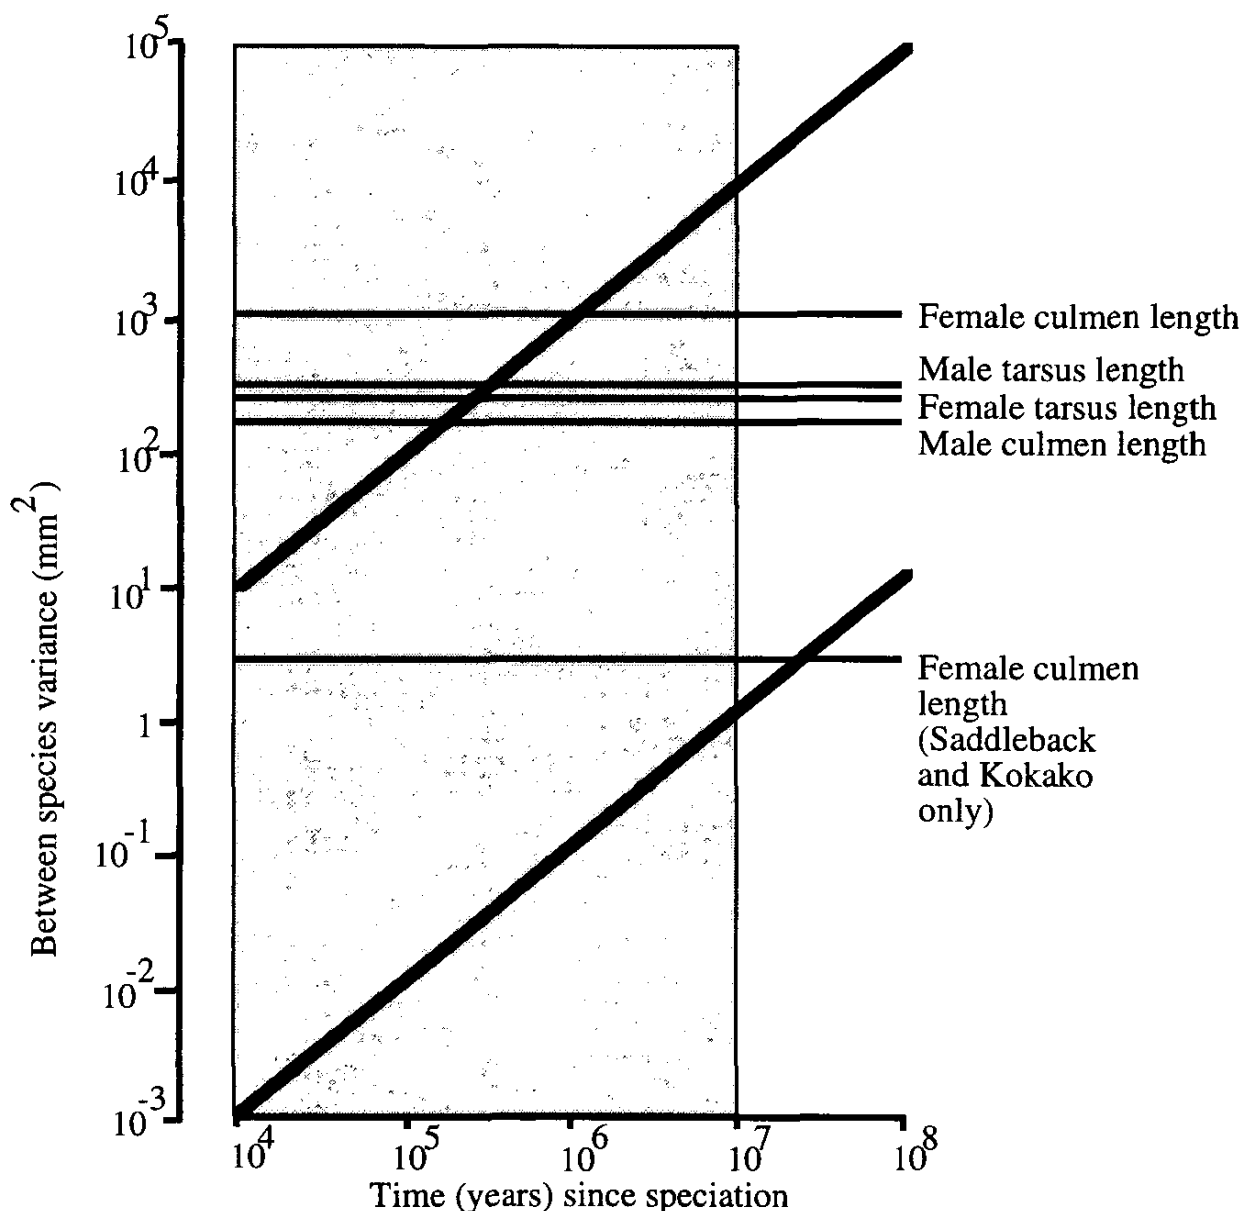

FIGURE 5 – Between-species variance in culmen and tarsus length in the Callaeidae in relation to estimated genetic drift over the time-scale within which speciation has occurred. Diagonal lines demarcate the 95% confidence interval for genetic drift, stippled area indicates the time-frame for divergence suggested by the avian fossil record. Between-species variance that exceeds the confidence limits for drift suggests directional selection over the corresponding time interval. Between-species variance less than the lower limit of draft suggests stabilising selection over the corresponding time interval.
